

C-Bus Scene Master

5035NIRSL Series

Scene Master is an elegant wall mounted C-Bus unit which provides a simple interface for the user to set lighting scenes and therefore completely change the look and mood of the space. Scene Master can replace multiple wall-mounted switches and dimmers and is suitable for both commercial and residential applications.

By simply pressing buttons on Scene Master, a user can access one of five lighting scenes (switching/dimming patterns) plus a Master-Off scene. For example, a conference room could be programmed by the user to completely change the mood in a room depending on whether it is being used for a meeting or a formal presentation.

To enable users of the C-Bus system to easily set up, view and alter scenes, Scene Master has the ability to

'learn' lighting scenes set by the user. Any scene can be recalled from any switch connected to the C-Bus system, as well as from Scene Master.

Scene Master is able to set a scene based on a signal from another system, for example an audiovisual system. In this way, a scene can automatically set when the audiovisual equipment in a boardroom starts at the beginning of a video presentation.

To allow the user to select lighting scenes easily from anywhere in a room, Scene Master comes with a credit card size, hand held infra-red remote control unit.

Like all the other units that make up a C-Bus system, Scene Master is Australian designed, developed and manufactured by Clipsal Integrated Systems Pty Ltd.

5035NIRSL Series C-Bus Scene Master

- Incorporates five programmable preset buttons and associated LEDs which indicate whether a lighting scene is active.
- The user is able to assign and recall a preset lighting scene directly from the unit.
- The unit has the facility to include up to nine separate lighting groups as part of each preset scene.
- Has the facility to control up to thirty-three programmable groups across the five presets.
- The unit has a Setup Mode, which allows scenes to be learnt, without the use of a computer.
- When programming a Scene, the unit has a button available to manually select the fade rate for that scene.
- A second press of each scene button shall cause the pre-programmed fade-in rates to be overridden and the target 'instantly' established.
- A 'Master Off' button is available on the Scene Master unit.
- The unit comes with a hand held infra-red remote control. The buttons on the remote function as the buttons on the unit.
- The master up/down buttons on the infra-red controller mimic the functions of the individual up/down buttons on the unit.
- If power to the unit is lost, all preset levels are stored in non-volatile memory.
- Scene Master is suitable for attachment to a standard electrical wall box.
- Cable termination is via a single Cat 5 data cable.
- For ease of maintenance, the lighting output units (dimmers, relays, etc) are mounted remotely.
- Scene Master forms an integral part of C-Bus and has the capabilities to communicate with other devices attached to C-Bus including relays, dimmers, switches and movement detectors.
- Dimensions: H = 88mm, W = 176mm, D = 23mm
